Wake Windows & Naps

Typical ranges for healthy, full-term little ones. Use them as a starting point — your child's cues come first.

AGE	WAKE WINDOW	NAPS	DAY SLEEP	NIGHT SLEEP	BEDTIME
0–3 months	**45 min – 1.5 hr**	4–6 (often short)	4–6 hr	8–10 hr (with feeds)	Late & fluid — often 9–11pm
4–5 months	**1.5 – 2.5 hr**	3–4	3–4 hr	10–12 hr	6:30 – 8:00pm
6–8 months	**2 – 3 hr**	3 → 2	2.5–3.5 hr	11–12 hr	6:30 – 7:30pm
9–12 months	**3 – 4 hr**	2	2–3 hr	11–12 hr	6:30 – 7:30pm
12–18 months	**3.5 – 5.5 hr**	2 → 1	2–3 hr	11–12 hr	6:45 – 7:45pm
18 months – 3 yrs	**5 – 6.5 hr**	1	1–2.5 hr	10.5–12 hr	7:00 – 8:00pm
3–5 years	—	0–1 (quiet time)	0–1.5 hr	10–12 hr	7:00 – 8:00pm

Total sleep in 24 hours

0–3 MONTHS	4–5 MONTHS	6–8 MONTHS	9–12 MONTHS	12–18 MONTHS	18 MONTHS – 3 YRS	3–5 YEARS
14–17 hr	12–16 hr	12–16 hr	12–16 hr	11–14 hr	11–14 hr	10–13 hr

Sleepy cues — start the routine

Slowing down · staring off · rubbing eyes or ears · first yawn · quieter, "glassy" look · losing interest in toys.

Overtired cues — go earlier tomorrow

Second wind & zoomies · arching · fighting the feed · crying at lay-down · catnaps under 30 min · 5am wake-ups.

Rule of thumb: the shortest wake window is usually first thing in the morning; the longest is before bedtime. Adjust in 15-minute steps and hold each change for 3 days before judging it.

General guidance only — not medical advice.
